## DOCUMENTATION

### Artistic

Lettuce - Oriental Type (for winter)

Can be harvested about 90 from sowing in spring and autumn, and 100-110 days in winter.  
Head weighs 0.8-1 kg, upright, firm, compact and slightly closed.  
Leaves are delicate light green and with tasty and sweet flavor.  
The plant is resistant to Downy Mildew (races 1-4).  
Can withstand hail and heavy rains with less damage than other lettuce varieties, because its leaves are partially closed.

### Painter

Lettuce - Oriental Type (for summer)

Can be harvested about 105 days from direct sowing.  
Head weighs 1-1.2 kg, large, open, firm.  
Leaves are delicate light green and with tasty and sweet flavor.  
The plant is resistant to bolting, therefore is suitable for sowing in summer: August-September, and then to harvest from mid-November.

### Super Ball Summer

Lettuce - Iceberg type (for summer)

Can be harvested about 105 from direct sowing.  
Plants are compact but set large head. Head is slightly flattened, uniform and tight, greenish-white with short core.  
Leaves are crispy, light green and tasty.  
The plant is resistant to bolting, therefore is suitable for sowing in summer: August-September, and then harvest from mid-November.

### Super Ball Winter

Lettuce - Iceberg type (for autumn-winter)

Can be harvested about 105 from direct sowing.  
Plants are compact but set large head. Head is slightly flattened, regular and large, greenish-white with short core.  
Leaves are crispy, light green and tasty. Fruit is smooth, well covered bottom, free from remarkable ribs.  
This lettuce performs best when planted in warm weather and harvested in cool weather.
