

K.E.C. HORTICULTURE

DOCUMENTATION

Rick

Lamuyo type (hybrid F1)

Plants are late in maturity, medium tall, resistant to TM. Can be harvested 60 days from transplanting. Very good fruit setting even in high temperatures. Large leaves protect the fruit from sunburn. Adapted to high tunnel production in winter, as well as outdoor production in other seasons.

Fruit has large elongated shape with very sweet and juicy flesh. Its green color turns into red when matures.

Fruit size is 16.5 cm in length and 8 cm in diameter and it weighs 220-240 gr.

Roger

Lamuyo type (hybrid F1)

Plants are medium in maturity, tall and a little sprawling with large green leaves, vigorous, resistant to TM. Can be harvested 55 days from transplanting.

Fruit has elongated bell shape with very sweet and juicy flesh. Its green color turns into red when matures.

Fruit size is 15 cm in length and 7.5 cm in diameter and it weighs around 230 gr.

Rafael

Lamuyo type (hybrid F1)

Plants are medium-early in maturity, tall, upright with thick stems and large leaves, very vigorous, resistant to TM. Can be harvested 50 days from transplanting. Very dependable fruit-set under both cool and warm weather.

Fruit is mostly 3-4 lobes. Fruit has large long bell shape. Its dark green color turns into red when matures.

Fruit size is 13 cm in length and 7 cm in diameter and it weighs 200-250 gr.
